

DESKTOP360

Citrix Virtual Apps and Desktops on AWS and Securely Delivered to Any Device

 aws marketplace

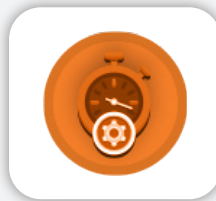

About Desktop360

Desktop360 from Entisys360 enables a remote workforce to work from anywhere (including their home) by deploying Citrix Virtual Apps and Desktops on AWS (your existing or a new subscription) with Windows-based virtual applications and desktops (up to 10 virtual desktops and/or five virtual applications).

What We Offer

Desktop360 reduces the network, infrastructure and security impact of "Work from Home" by hosting Citrix Virtual Apps and Desktops on AWS to reduce endpoint management complexity and allow for consumption-based compute/storage.

Desktop360 makes applications installed in Citrix Virtual Apps and Desktops on AWS simpler to deploy while at the same time increasing overall performance and improving SLAs.

With Desktop360, organizations can achieve measurable business outcomes when users are able to access their desktops, applications, files and workflows from any endpoint device, regardless of form factor or operative system.

Businesses will see an optimal and cost-efficient Citrix Virtual Apps and Desktops on AWS experience with Desktop360 as it allows the organization to adapt to the complex, ever changing business, data access and application requirements.

"As our clients began leveraging AWS for IaaS and PaaS to deliver their business applications, Desktop360 was developed by Entisys360 to utilize combination of Citrix and AWS to deliver cost efficiency with scaling VDI workloads, automation capabilities, high availability architecture and security for 3rd party and employee use."
