

Tools Rationalization

The sheer number of cybersecurity tools available today is staggering.

Many organizations struggle to make sense of exactly which combination of tools will give them the greatest security posture. What ends up happening to most of us is tool sprawl, partially deployed solutions, decentralized monitoring, duplicate capabilities, and ineffective defenses.

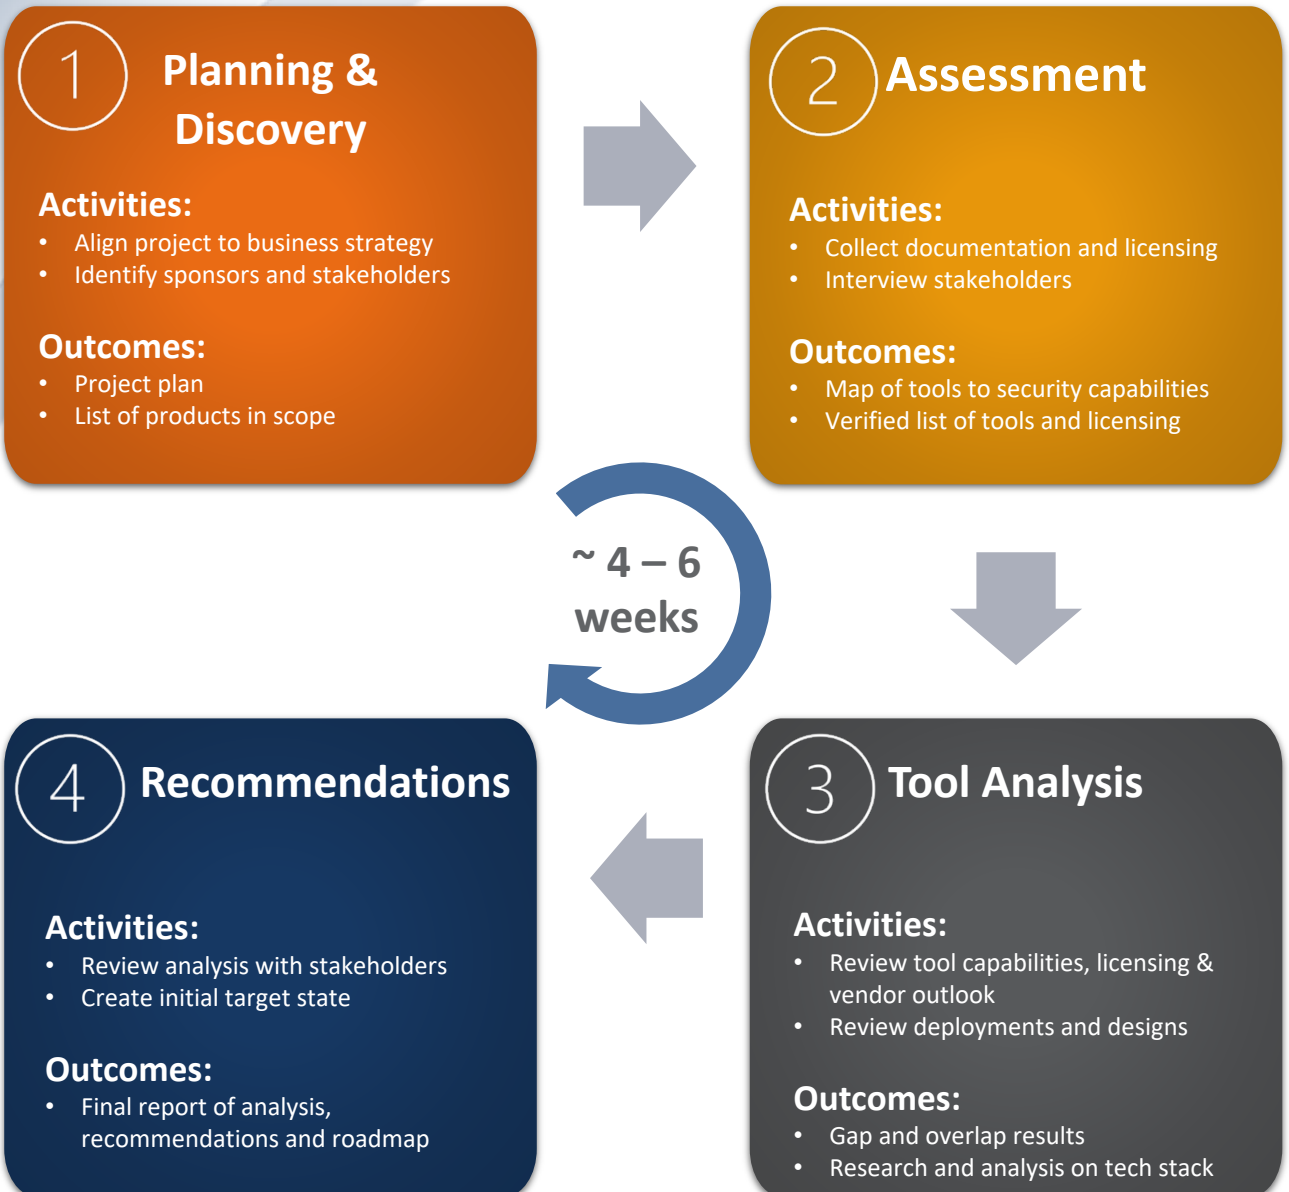

Through tools rationalization, organizations are finding an average of **20% cost savings**,¹ simplified infrastructure, and an availability of resources—allowing organizations to focus on what really matters.²
